

# Seeking world-class research leaders

The Baker Institute is Australia's first multidisciplinary institute dedicated to tackling cardiovascular disease, diabetes, obesity and metabolic disorders. With over 360 staff and graduate students, and a history spanning more than 90 years, the Institute is internationally renowned for its high quality translational research output encompassing cellular and molecular biology, pre-clinical and clinical research, epidemiology, public health and health services research. It is based in Melbourne in the Alfred Medical Research and Education Precinct, with a satellite facility focussed on Aboriginal Health in Alice Springs.

The Institute has recently launched an ambitious growth strategy to build on its primary research themes:

- Hypertension and Cardiac Disease
- Physical Activity
- Obesity and Diabetes
- Bioinformatics
- Atherothrombosis
- Diabetes complications

As part of this strategy, the Institute will make external appointments of up to six full-time research leaders with established interests relevant to these themes over the next three years.

Applicants should be a minimum of ten years postdoctoral and at the position of Associate Professor or above. Generous establishment, transition and support packages will be negotiated with successful candidates.

Please send your expression of interest and CV to:
