

SIMONS FOUNDATION

The Simons Foundation's mission is to advance the frontiers of research in mathematics and the basic sciences.

We sponsor grantmaking programs in mathematics and the physical sciences, life sciences, autism research and public outreach. Our new intramural research division, the Flatiron Institute, advances science through computational methods.

The foundation's Mathematics & Physical Sciences division supports mathematicians, physicists, theoretical computer scientists and others who aim to uncover the fundamental truths of our world and our universe.
