HUILV LANDSCAPE CONSTRUCTION DEVELOPMENT CO., LTD.

Phoenix Lake in Tongxiang.

## Huilv Landscape: constructing environments according to nature's principles

**H**uilv Landscape Construction Co., Ltd. is a landscape constructor whose mission is focused on repairing and improving the environment. In recent years, our planet's ability to self-regulate and repair its ecosystem has been challenged by man. Huilv aims to recover and reconstruct natural ecosystems damaged by human activity.

For decades, the environment has suffered as the process of industrialization and urbanization has gathered pace. In China, while urbanization and the rapid development of the economy has enabled people to enjoy financial benefits, this has been traded off against environmental deterioration.

Huilv is proud to have been involved in the construction of the Phoenix Lake in Tongxiang in 2013. Positioned as a major

landscape within the city, Phoenix Lake also provides an emergency water supply, helps to prevent city flooding and offers a green leisure area. During the design process for the Phoenix Lake, Huilv considered how best to use this green space in a way that would have a positive impact on surrounding areas, improve the quality of the environment, have a positive ecological effect throughout the city and provide urban inhabitants with an extensive, open outdoor area. The provision of a place within the city for inhabitants to reconnect with nature and relax was at the forefront when we designed Phoenix Lake.

According to the concept of ecological harmony, we endeavoured throughout the design process to choose natural materials that display excellent water permeability. We respected the texture of

the original environment and held true to the premise of minimum interference. The multidimensional activity space was used to protect living organisms and we placed different items such as bird cages, fish cages and tree stumps in places that would allow people to observe birds, fishes, squirrels and insects closely.

It is hoped that Huilv's sympathetic design and construction of the Phoenix Lake will provide those living in Tongxiang with an opportunity to reconnect and interact with the natural world in the heart of the city.
