Supplementary figure 2 Intracellular Ca\(^{2+}\) influx in memory CD4\(^{+}\) T cells from RA patients, OA patients and healthy donors. The memory CD4\(^{+}\) T cells were loaded with 1 \(\mu\)M fura-2-AM, and the assay was performed using a fluorometric imaging plate reader. (a) Maximal RFU\(_{340/360}\) values obtained from 50 RA patients, 50 OA patients and 10 healthy donors. The results are expressed as the dot plot and mean value. (b) Correlation between Ca\(^{2+}\) influx and DAS28 in RA patients (\(r=0.178\)).
