Supplementary Figure 4. *Accelerated lymphomagenesis is restricted to Eu-myc; Eu-tTA; TRE-p53.1224 mice*

Kaplan-Meier curves showing survival of Eu-myc (upper panel), Eu-myc; Eu-tTA (middle panel), and Eu-myc; TRE-p53.1224 (lower panel) transgenic mice (red curves). Curves for these three groups combined (black) and Eu-myc; Eu-tTA; TRE-p53.1224 tri-transgenic mice (blue), as shown in Fig. 6a, are also shown here for reference. Note that lymphomagenesis in each Eu-myc genotype is significantly delayed ($P<0.0001$) compared with Eu-myc; Eu-tTA; TRE-p53.1224 mice, indicating the absence of functional p53 shRNA expression from the TRE-p53.1224 transgene alone.
