Supplementary Figure 5. Accelerated Eu-myc lymphomagenesis using TRE-p53.1224 line D

(a) Kaplan-Meier curve showing decreased survival of Eu-myc; Eu-tTA; TRE-p53.1224 (line D) tri-transgenic mice (blue; n=2) compared with their collective double (Eu-myc; Eu-tTA and Eu-myc; TRE-p53.1224) and single Eu-myc transgenic littermates (black; n=7), referred to as Eu-myc controls.

(b) p53.1224 small RNA northern blot of spleens (S) or lymph nodes (L) isolated from moribund Eu-myc; Eu-tTA; TRE-p53.1224 tri-transgenic mice of indicated founder line, with a bi-transgenic control.
