Supplementary Figure 8. Effects of ischemia and reperfusion in cTnl A164H mice in vivo. (a) Survival curve for mice subjected to 30 min of LCA occlusion, followed by 24 h of reperfusion. The zero time point represents the onset of reperfusion. (b) Area at risk (AAR), infarct area as a percentage of AAR, and infarct area as a percentage of entire LV area as measured 24 h after reperfusion. N=8 (ntg) and 10 (tg). There were no significant differences between groups for any parameter (P>0.05).
