

Supplementary Figure 1

**Supplementary Figure 1. Genotype analysis of *Nor-1*<sup>-/-</sup>*Nur77*<sup>-/-</sup> mice.** Genotyping of wild type and *Nor-1*<sup>-/-</sup>*Nur77*<sup>-/-</sup> mice were performed on tail biopsies using a PCR assay as described previously<sup>22,23</sup>. PCR of genomic DNA identified wild type alleles of *Nor-1* (960bp) and *Nur77* (1100bp) in mice 1-3 (*Nor-1*<sup>+/+</sup>*Nur77*<sup>+/+</sup>). Genotyping confirmed the presence of mutant alleles of *Nor-1* (1200bp) and *Nur77* (700bp) in mice 4-6 (*Nor-1*<sup>-/-</sup>*Nur77*<sup>-/-</sup>).
